

WAKE UP THE THREAT IS REAL

The Barracuda products you need to keep your business emails protected from threat, wherever and however you operate.

THE THREAT

We all need to wake up to the fact that you can be hacked without even realising. Meanwhile, cybercriminals are impersonating you, taking money from your customers and giving your untrained employees the authorisation to make bogus payments without your knowledge.

The technologies behind these hacks are highly sophisticated and cybercriminals are smart. They go through methodical processes to convince your customers and employees that they're communicating with you, and do so by:

PHASE 1
Monitoring your
email conversations

PHASE 2
Waiting for the right opportunity
to impersonate you

PHASE 3
Cloning your
email account

PHASE 4
Emailing customers/employees,
pretending to be you without your
knowledge

It's estimated that 1 in every 99 emails received by an employee will be a phishing attack, which amounts to around 5 attacks a week. Considering 30% of these emails are likely to bypass default security systems, the threat is very much real and present.

Sophisticated security solutions to protect against phishing attacks doesn't have to be expensive. For as little as a price of a cup of coffee, per employee, per month, Sunrise and Barracuda can protect against these attacks and potentially save your business tens of thousands of pounds.

THE SOLUTION

To help you protect your emails, we've partnered with Barracuda to offer our customers the latest email security solutions with these key products to suit all of your business needs.

1. Barracuda Essentials

The industry's most comprehensive email security platform.

Barracuda Essentials provides complete, cloud-based gateway protection against advanced targeted attacks. It scans incoming email using advanced techniques, scans outgoing email to prevent data loss, helps to ensure email continuity, and creates unalterable email archives - all without the need to install any additional hardware or software.

KEY FEATURES

Email Security

- Protects against email-borne threats and targeted attacks.
- Scans emails for suspicious and malicious attachments.
- Protects email users against malware downloads.

Archiving and Backup

- Integrates with cloud-based email services.
- Simple steps to comply with regulatory retention requirements.
- Easily searchable mailboxes and archives on and offline.

Continuity

- Emails delivered during email outages or loss of connectivity.
- Emails switched to cloud-based services if primary email services become unavailable.

2. Barracuda Sentinel

Using AI to outsmart attackers and protect your business and data.

Barracuda Sentinel detects threats that traditional email security systems can't. It integrates directly with Microsoft Office 365 APIs monitoring your mailboxes to detect attacks coming from both internal and external sources. It also uses AI to detect signs of malicious intent and deception within every email, with virtually no IT administration required.

KEY FEATURES

Email Compromise Defence

- AI applied to study users' unique communication patterns.
- Identifies content anomalies to find and block attacks.
- Superior accuracy at detecting attacks compared to policy-based strategies.

Account Takeover Protection

- Stops phishing attacks used to harvest credentials for account takeover.
- Detects and alerts on anomalous email behaviour.
- Finds and removes all fraudulent emails sent from compromised accounts

Brand Protection

- Helps you set up Domain-based Message Authentication Reporting and Conformance (DMARC).
- Prevents email domain fraud with DMARC.
- Includes granular visibility and analysis of DMARC reports.

3. Barracuda PhishLine

Computer-based security awareness training to counter sophisticated attacks.

Employees are your weakest link in the fight against cybercrime. Barracuda PhishLine transforms your employees into a layer of defence by teaching them to recognise and manage the latest attack techniques used to help stop email fraud, data loss, and protect your brand. It embeds learning into your everyday business processes with customised simulations to test and reinforce good behaviour.

KEY FEATURES

Simulation

- Attack simulations train your employees to spot email threats.
- A/B tests prevent users from receiving duplicate simulations.
- Templates let users customise simulations.

Training

- Simulation-based training.
- Continuous testing.
- Powerful reporting for administrators.
- Active incident response awareness.

Reporting

- Provides advanced analytics and reporting tools.
- Enables users to identify effectiveness of training.
- Reports how users react to actual phishing attacks.
